### Beskrivning

Författare: .

This anthology aims to provide some Nordic perspectives on the young and evolving field of health law – or biomedical law – by reflecting on a number of issues that have been explored within the activities of the Nordic Network for Research in Biomedical Law. In the emergence of this fairly new legal discipline, it has been very clear that the Nordic region forms a part of Europe that has been strongly influenced by both hard and soft law initiatives from the European Union and the Council of Europe, but also that Nordic identity, culture, and collaboration remain an important factor in the legal development of this particular region.

Läs mer

The book is divided thematically into three sections, where the first deals with foundational and general issues of health law, the second with patients' rights, and the third with issues related to advancements in biomedical science.

The first part includes two chapters on the relationship between health law and human rights, together with discussions on specific Nordic approaches to the organisation and regulation of health services, to constitutional protection of the right to health and to the legal discipline of health law, as such. One chapter provides an overview of the mission and tasks of the Nordic Committee on Bioethics.

The section on patient's rights deals with the development – or absence – of special legislation on the status of patients, but also with issues of coercive care and of cultural accommodation

in health services, as well as the implications that assessments and decisions made in health care services may have for the patient's right to other entitlements, e.g. sickness benefits. In the third section, on biomedical science, one author explores the concept of human dignity while another discusses the challenges facing European integration of biomedical research regulation. Specific topics, such as different approaches to biobank regulation and genetic privacy in family relations, are also addressed, and, in the final chapter, the legal status of deceased foetuses.

While the anthology thus in part provides specifically Nordic perspectives on health law, the issues discussed are at the same time general. The book is therefore well suited not only to readers who want a better understanding of the Nordic situation, but also to anyone with an interest in the challenging health law issues facing society in our time.

#### Om författarna

The authors are members of the Nordic Network for Research in Biomedical Law.
